Our award-winning website offers reliable, easy-to-understand explanations of how the world works. From fun quizzes that bring joy to your day, to compelling photography and exciting listings, HowStuffWorks Play offers something for everyone. Sometimes we explain how stuff works, another time, we ask you, but we're always exploring the name of fun! Because learning is fun to stick with us! Quizzes are free! We send questions and personality tests to your inbox every week. By clicking Register, you agree to our privacy policy and confirm that you are 13 years old or longer. Copyright © 2021 InfoSpace Holdings, LLC, System1 Company This information is a lesson in the largest Tinkercad project. Check out this and more projects at Tinkercad.Project Overview: In these projects, students will learn how they can make a keychain by connecting letters together so they can be 3D printed. Although this could be done with any name, in this example, we will use my last name. In making it into my lesson I provided additional ideas and challenges to get students to personalize the project in their own style. Begin! InstructionsSeal to the next step. In this step, we will summarize all the letters you need to write your name by placing them in a working plane. InstructionsSeal the Letters panel to the right of the screen. Drag each letter of your name to the work plan. Remember: I use the letters of my last name, you should use the letters from your name or any other word you would like to convert to a keychain. Go to the next step. Make sure all your letters are aligned to the bottom. InstructionsReat all letters on the work program. On the Toolbar, on the Customize menu, select Align. Align the letters so that the bottom of each letter matches the other letters. Go to the next step. To 3D print the keychain all off his letters overlap slightly. If the letters did not touch, they could have come down from the 3D printer as separate letters. Let's connect the letters now. InstructionsTom the view so you are looking down on your name. Select the second letter in your name and use the arrow keys on the keyboard to move closer to the first one. Note: Each letter should be a letter before it for about 1mm, but it doesn't need to be accurate. Repeat the previous step for each letter for the word. When each letter overlaps the letter before it's your name, you are almost finished. Not all letters are the same width, and you will probably find that some letters overlap more than others. If you want to specify how many of your letters overlap you can set the grid snap to 0.25 and use the arrows on the keyboard to adjust the amount, each letter overlaps its nearest neighbor. Go to the next step. If you select all your letters and group them you will see that they all become one object. Since each of the letters has the same height of grouped shapes, it seems difficult to read. We can determine by changing the height of every other letter. Instructions Select all letters and group them into one object. Is your name a little hard to read like mine was? Let's fix this. Double-click your name to edit the group. Note: You know that you are editing a group if you see a red rectangle below your letters. Lists must also return to their original colors by editing the group. Select the second letter in your name and use the white dot (handle) at the top to make the letter shorter than the letter next to it. Repeat the previous step with a once different letter in your name. In doing so, we will be able to see each of the group's characters better when we when you edit a group. Click anywhere I plan my work outside the red group editing rectangle to finish editing the group. You should see your name changed back to group color, and it would be much easier to see each letter. Go to the next step. Before we finish, we need to create a way to add a keychain to the key ring. By adding a key ring, you will be able to attach it to your keys or zipper on the backpack. InstructionsPlace a cylinder to a work plan and size up to 4mm square and 3mm long. Place the second cylinder on the work plans and measure it up to 2 mm square and 5 mm long. Make the second cylinder a hole. Select both cylinders and align the cylinders vertically so that they have the same center. Group the cylinders into one object. Select the ring key and use the arrow keys on your keyboard to push the ring to the first letter of your name. To complete the key chain group your name and ring together in one object. Congratulations you just finished your name key ring. Good Job! In the next lesson, you will learn to customize your key lesson! Next lesson: Make it your name for cars that start with the letter P include Packard, Pagani, Paige, Panoz, Panther, Peerless, Paulin, Perana, Peraves, Peugeot, PG, Phoenix, Piecha Design, Pierce Arrow, Pininfarina, Plymouth, Pontiac, Pope, Porsche, Posaidon, Exclusive PP, Premier 4509, Print Tech, Prior Design, Prodrive, Project Kahn and Protoscar. This list contains car models and makes it manufactured from 1900 to today. Car brands that begin with the letter P include Pelladini, Pioneer, PRB, Purvis Eureka and Python from Australia. Car brands from Brazil that begin with the letter P include PAG, Pretty and Puma. South American auto brands that begin with the letter P include Perana, Protea and Puma. One car that starts with a P is Packard. This brand was synonymous with luxury in the United States between 1899 and 1958, the years Packard cars were produced. Since 2014, collectors and fans continue to see this brand enthusiastically. One of the Italian car manufacturers starting with P is Pagani. This company is named after its founder Horacio Pagani, and it produces super-cars. Porsche, another car manufacturer that starts with the letter P, produces German sports cars. The first Prosche was released in 1938 and still produces cars today. Sign up for the BuzzFeed Quiz Newsletter – Binge on the latest quizzes delivered right to your inbox with the Quiz newsletter!
